SLASH - EARLY SESSIONS - SLASH
JULUKA - WARNER BROS.

HELLO STUDENTS

Welcome to class. Today we are going to discuss Radio Theory, most notably recent theories. The most popular theories today are the AOR theory and the CHR theory, which overlap quite a bit. Since you all know about these, we'll not discuss them further.

What we will discuss is an experiment that was carried out in the highly populated, ever expanding hotbed of musical activity, the Triangle area of North Carolina. The experiment was first tried by dedicated individuals who knew no glory and were scoffed at by other radio stations and meanie record companies. Then one Christmas Eve Santa came to say . . . whoops, got carried away. To continue, the experiment yielded the WDUK-1600 AM theory, which has now come to be known as the WXDU 88.7 1000 watts FM LAW. This law was slowly accepted at first but now is an undeniable widespread truth. The descendants of the aforementioned experimenters are now incredibly enthusiastic disciples of this law and are striving to let everyone know about the Truth. So, all of you must have an open mind and assist them in their Quest for the ultimate station (i.e., Give Them Records!)

Any questions? If so, then feel free to call me at the office, 3-5 pm. Monday and Wednesday at 919-684-2957, or at home at 919-684-7125. Otherwise, good luck on the exam next week.

Sincerely yours,

Joel Gartland,
Music Director
